No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /SIDS2/gcgdata/geneseq/geneseqn-emb1/Na1980.DAT:*

                                                                                                                                                             The present invention describes the protein and coding sequences of the human cyclic nucleotide phosphodiesterase PDEXV. This enzyme is capable of catalysing the degradation of cyclic nucleotides. The sequences are useful in the treatment of cardiovascular, gastrointestinal, spleen, corpus cavernosum, kidney, liver, skeletal muscle, testis and prostate related disorders, and in the enhancement of the male erectile response and the treatment of female sexual dysfunction. The present sequence is

                                         The present invention provides the protein and coding sequences of novel human and rat type 11 phosphodiesterases (PDEII). These are useful for studying intracellular signal transduction mechanisms, in screening highly-selective inhibitors as drugs for treating diseases associated with the enzymes and for the identification or selection of selective inhibitory action against multiple type phosphodiesterases. The present sequence is a coding sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences of nove human and rat type II phosphodiesterases (PDEII). These are useful for studying intracellular signal transduction mechanisms, in screening highly-selective inhibitors as drugs for treating diseases associated with the enzymes and for the identification or selection of selective inhibitory action against multiple type phosphodiesterases. The present sequence is a coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  169 AGGATCGACGATTCAATGATGAAATCGACAAGCTGACTGGATACAAGACAAAATCATTAT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of novel human and rat type 11 phosphodiesterases (PDBII). These are useful for studying intracellular signal transduction mechanisms, in screening highly-selective inhibitors as drugs for treating diseases associated with the enzymes and for the identification or selection of selective inhibitory action against multiple type phosphodiesterases. The present sequence is a coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAAAAGGTGAAAATCACAAGACTGGTCCAAATCTCTGGGGGCCTCTTTGGCTGAAAAACAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          769 TATCTGGTTTTCACATAAGATCTGTTCTTTGTGTCCCTATTTGGAATAGCAACCACCAAA 828
                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences of nove-
human and rat type 11 phosphodiesterases (PDE11). These are useful for
studying intracellular signal transduction mechanisms, in screening
highly-selective inhibitors as drugs for treating diseases associated
with the enzymes and for the identification or selection of selective
inhibitory action against multiple type phosphodiesterases. The present
sequence is a coding sequence of the invention.

The present sequence is that of CDNA encoding HSPDE10A1 (see AAY95521), a novel human cyclic nucleotide phosphodiesterase. The CDNA was initially identified in Incyte Clone 826776 from the prostate CDNA library PROSTHO4 using BAST3 analysis and human phosphodiesterase 5 as query. Full-length cDNA sequences of HSPDE10A1 were obtained from a human skeletal muscle library using the complete CDNA insert of Incyte Clone 826776 as probe. The invention provides expression vectors, host cells, antibodies, agonists and antagonists, as well as methods for diagnosing, treating or preventing disorders associated with expression of HSPDE10A1, especially cancer and immune disorders. A fragment of the present sequence from about nucleotide 1168 to nucleotide 1212 is useful in hybridisation or amplification technologies to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of CDNA encoding HSPDE10A2 (see
AAY95522), a novel human cyclic nucleotide phosphodiesterase. The
CDNA was initially identified in Incyte Clone 856776 from the
prostate CDNA library PROSTUTO4 using BLAST analysis and human
phosphodiesterase 5 as query. Full-length CDNA sequences of
the Complete CDNA insert of Incyte Clone 826776 as probe.
CT PRDE10A2 were obtained from a human skeletal muscle library using
the complete CDNA insert of Incyte Clone 826776 as probe.
CT The invention provides expression vectors, host cells, antibodies,
agonists and antagonists, as well as methods for diagnosing,
treating or preventing disorders associated with expression of
CT SPDE10A, sepecially cancer and immune disorders. A fragment of
the present sequence from about nucleotide 1187 to nucleotide 1227
is useful in hybridisation or amplification technologies to
distinguish HSPDE10A2 sequences from related sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human cyclic nucleotide phosphodiesterases, referred as HSPDE10A1 HSPDE10A2, useful for treating and preventing cancer and immune
                                                                                                                                                                                                                                                                                                                                                                                                                                      557 ACCAGTGGTGAAATTTACCAAATCCTTTGAATTGATGTCCCCAAAGTGCAGTGCTGATGC

                                                                                               The present invention relates to human phosphodiesterase (PDE)-like enzymes and their corresponding polynuclectides. The invention also relates to reagents which regulate PDE-like enzyme activity and reagents which bind to human PDE-like enzyme gene products which can be used to regulate degradation of cGMP. Sequences of the invention are useful for modulating the activity of a PDE-like enzyme in a disease such as urinary incontinence, benign prostate hyperplasia, erectile dysfunction, cancer, diabetes or cardiovascular disorder (e.g. ischaemic diseases, myocardial infarction). The present sequence is a cDNA encoding human PDE-like
                                                                                                                                                                                                                                                                                                                                                                                                    290
                                                                                                                                                                                                                                                                                                                                                                        9
polynucleotide encoding a human phosphodiesterase-like enzyme, or treating a disease such as urinary incontinence, benign hyperplasia, erectile dysfunction, diabetes, cancer or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes cyclic GMP (cGMP)-specific phosphodiesterase inhibitors comprising tricyclic compounds or their salts. The inhibitors are useful for the treatment and prevention of erectile failure and feminine function failure. The compounds have excellent cGMP-phosphodiesterase inhibitory action. The present sequence encodes human cGMP phosphodiesterase V, which is used in an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                             Tricyclic compounds having cyclic GMP-specific phosphodiesterase inhibitory action useful as pharmaceuticals, and preparation and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The recombinant production of the cyclic guanosine monophosphate specific phosphodiesterase (cGB-PDE) facilitates the analysis and structure of the cGB-PDE, particularly of activities involved in signal transduction. cGB-PDE binding proteins can be used for immunisation, for the purification, detection or quantification of cGB-PDE, or for modulating cGB-PDE activity. This is a constructed, composite cGB-PDE coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (cGB-PDE) DNA

                                                                                                                                                                                                                                                                                                                                                                                                  cyclic guanosine monophosphate (cGMP) binding, cGMP-specific phosphodiesterase (designated cGB-PDE). The enzymes can be recombinantly expressed by standard recombinant methodogy. Antibodies specifically immunoreactive with the cGB-PDE enzyme may be used to modulate the activity of the cGB-PDE enzyme. Additionally, they may be used in assays et gry me linked immunoabsorbant assays (ELISAs) to detect the presence of the enzyme in bloopical samples. The present sequence represents a cDNA encoding the human cGB-PDE enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AGATTCCTG - - - AAGGAGCTCCATTTACTGAAGATGAAAAAGTTATGCAGATGTATC
